

Providers of Cutting Edge Technology

Redneckz Wireline is a leading specialist in slickline & braided line for all types of well intervention. We're proud to have always been leaders in cutting edge technology, expertise & service in downhole wireline services. Our operators & equipment deliver solutions for almost any downhole issues using conventional slickline and innovative downhole tools.

By investing significantly in high-pressure equipment & top personnel, Redneckz Wireline has proudly built a reputation as a leader in the slickline sector. We strive to keep our equipment, personnel & procedures up-to-date, always keeping up with the fast pace of technology.

We understand that equipment alone is not enough to provide great service. Our senior supervisors have decades of experience in the industry, with knowledge that separates our team from our competitors. Their experience involves all types of slickline work - from recorders & plug work to tubing & casing fishing.

Our Services

High Pressure Operations / Critical Sour

Our senior supervisors have decades of experience in the industry, with knowledge that separates our team from our competitors. Their experience involves all types of slickline work - from recorders & plug work to tubing & casing fishing.

Fishing

Wireline tools used for fishing operations are varied depending on the application & can be custom built.

Flow Control Equipment Installation & Removal

Flow Control equipment is designed to manipulate well production & can be integral to the tubing or casing

We hold an extensive on-the-shelf selection of plugs, chokes & wireline tools required for removal, installation & flow control manipulation

Delivery. Well Ahead.™

Perforating

Our supervisors are trained & certified in the safe handling of perforator explosives. Our explosive perforators do not burn holes but punch clean, round holes of a specified diameter. They have many uses, such as:

- 👉 punching holes to circulate & kill a well
- 👉 draining tubing
- 👉 lifting water from low-pressure gas wells
- 👉 circulating out sand or mud
- 👉 opening zones
- 👉 operating plunger lift installations

Horizontal Wireline Operations

Redneckz Wireline is experienced in horizontal wellbore sections in both pump down & static environments. Our pump down operations use varied tool string components.

We have also performed pump down memory logging operations in tubing & casing, while our innovative high-deviation roller assemblies allow us to work closer to horizontal that at any time in the past.

Swabbing

When you need to unload fluid or initiate flow, Redneckz Wireline has the knowledge, experience, & equipment to tackle any swabbing job. The dual pressure sensors allow real-time monitoring of both tubing & casing during swabbing operation.

Reservoir Pressure & Temperature Monitoring

When you need to know what's going on downhole, pressure / temperature gauges may be the answer. Designed for any pressure & temperature - & innovative techniques that have been put to the test in some of the most intricate operations & hostile environments.

Time is critical, & we strive to provide data reports within 24 hours.

Additional Services

- 👉 Hi Expansion Gauge Hanger
- 👉 Electronic Firing Head (QC Trigger)
- 👉 Kinley Tools & Perforators
- 👉 Production Optimization
- 👉 Conductor Slickline
- 👉 Technical Services
